Spill Containment Systems

There are three primary components to a spill containment system.

Spill Containment Barriers: Calicorp barriers in are adaptable to all battery rack configurations.

Surface Coatings: Calicorp acid resistant surface coatings resist acid solutions up to 93% sulfuric acid for extended periods of time without deteriorating.

Absorption and Neutralization Products: Calicorp absorption and neutralization products include spill clean up pads, indicator spray and our Batt-Mat™ absorption and neutralization pillows that will absorb and neutralize over 3 quarts of electrolyte per pillow.

Emergency Spill Response Kits:

Our spill response products provide you with the means to rapidly react to an acid spill event and restore your facility to normal working conditions without losing control of the spill or risking injury to personnel. Calicorp offers several different kits each designed with your application in mind.

Calicorp Environmental Safety Products Are Also Available for Ni CAD Battery Systems and Diesel Fuel Spill Mitigation Applications.
